Relief, direct acting poppet type differential area

Common cavity, Size 10

VSDN-10A

04.15.23 - X - 85 - Z

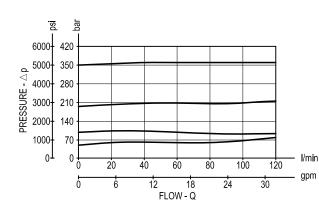

Description

Flow is blocked from 2 to 1 until pressure increases to meet the selected valve setting, lifting the poppet from its seat and allowing relief flow through port 1 to tank. Pressure at port 1 is additive to the relief setting of the valve. The unique Bosch Rexroth Oil Control poppet design provides enhanced stability at all flows and pressures.
