

Pressure reducing and relieving, direct acting spool type

VRP-R

05.90.27 - X - Y - Z

RE 18309-72

Edition: 03.2016

Replaces: 04.2010

Description

Initially, flow passes freely from P to REG. When the pressure at REG exceeds the pressure setting, the valve acts to restrict input flow at P. This increases the pressure drop through the valve and maintains consistent pressure at REG. The spring chamber is drained to prevent a build-up of back-pressure against the spool. Additionally, if pressure at REG rises above the pressure setting, flow is relieved to R (Tank) until the setting is re-attained.

P = Inlet
 REG = A (Reduced pressure)
 R = T (Tank)

Technical data

Max. operating pressure	210 bar (3000 psi)
Max. flow	20 l/min. (5 gpm)
Max. leakage: 10 cc/min. (0.6 in ³ /min.) at 90% of pressure setting	
Weight	0.85 kg (1.87 lbs)
Manifold material	Aluminium
Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.	
Fluid	Mineral oil (HL, HLP) according DIN 51524
Fluid temperature range	-30 °C to 100 (-22 to 212 °F)
Viscosity range	5 to 800 mm ² /s (cSt)
Recommended degree of fluid contamination	Class 19/17/14 according to ISO 4406
Other technical data	see data sheet 18350-50

Note: for applications outside these parameters, please consult us.
