

## Flow regulator, 2-way, pressure compensated, with check valve for free reverse flow

VRFC2-VU

0M.24.03 - X - Y

### Performance

### Description

A constant flow rate, regardless of system pressures, is established from E to R, while a minimum pressure differential of approximately 5 bar (70 psi) exists between the two ports. Output flow can be varied from zero (closed) to the nominal maximum rating. Free flow is permitted from R to E, regardless of valve adjustment, when pressure overcomes the spring bias of the check valve.

### Technical data

#### Hydraulic

Operating pressure bar (psi) up to 210 (3000)

Q = max inlet flow "E" port (see "Dimensions")

Flow range adjustment : 0 - 3 turns

#### General

Manifold material Aluminium

Note: aluminium bodies are often strong enough for operating pressures exceeding 210 bar (3000 psi), depending from the fatigue life expected in the specific application. If in doubt, consult our Service Network.

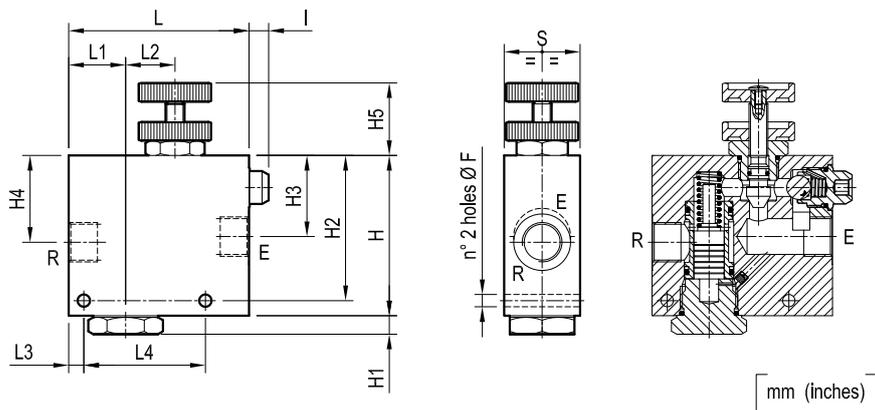

Weight see "Dimensions"

Fluid temperature range °C (°F) between -30 (-22) and +100 (212)

Other technical data see data sheet RE 18350-50

**Note:** for applications outside these parameters, please consult us.
