

# 3/2- and 2/2-way cartridge valve type BVE

for any flow direction, zero leakage,  
all ports pressure resistant

Flow  $Q_{max}$  = 300 lpm  
Perm. pressure  $p_{max}$  = 500 bar

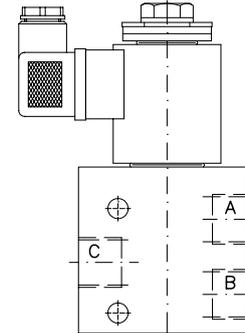

Additional valves with same function:

- Type EM, EMP D 7490/1
- Type BVG 1, BVP 1 D 7765 ( $Q_{max}$  = 20 lpm,  $p_{max}$  = 400 bar)
- Type NBVP 16 D 7765 N ( $Q_{max}$  = 20 lpm,  $p_{max}$  = 400 bar)
- Type BVG 3, BVP 3 D 7400 ( $Q_{max}$  = 60 lpm,  $p_{max}$  = 315 bar)

Cartridge valve

Version with connection block

## 1. General

The solenoid actuated 2/2- and 3/2-way directional valves type BVE are designed as seated cone valves. All ports are equally pressure resistant due to the internal pressure compensation.

The valve returns automatically into its idle position because of the spring return, while not actuated. The valves are completely made of steel, with all functional internal components being hardened, permanently lubed by the hydraulic fluid.

As these valves are designed as cartridge valve, installation is most simple and quick.

The solenoid coil can be easily replaced, without opening the hydraulic system e.g. when a different voltage is required.

There are also individual connection blocks available for these valve, enabling direct pipe connection.

## 2. Available versions, main data

Order example:

**BVE 3 Z - B 2,5 - G 24 - 1/2**

Table 2,  
see page 2

Table 4, see page 3

Table 3 and 3a, see page 3

Table 3, see page 2

	Flow $Q_{max}$ (lpm)	Pressure $p_{max}$ (bar)	Symbols		
			R	S	Z
<b>BVE 1</b>	20	500			
<b>BVE 3</b>	70	400			
<b>BVE 5</b>	300	400	Type BVE 5 only with symbol R		

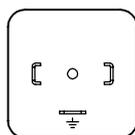

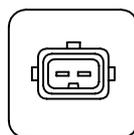

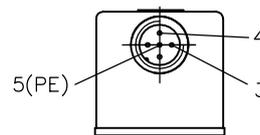

**Table 2:** Orifice (additional element) only available for versions with indiv. connection block for pipe connection, see table 4, For individual orders, see sect. 5.3

Basic type, size	Coding	Ø (mm)	System or accumulator charging pressure range
<b>BVE 1.. - 1/4</b>	B 0,6	0.6	≤ 500 bar

### 3. Additional parameters

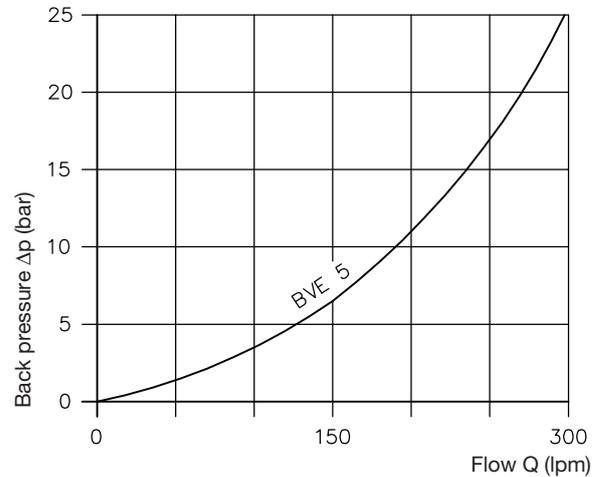

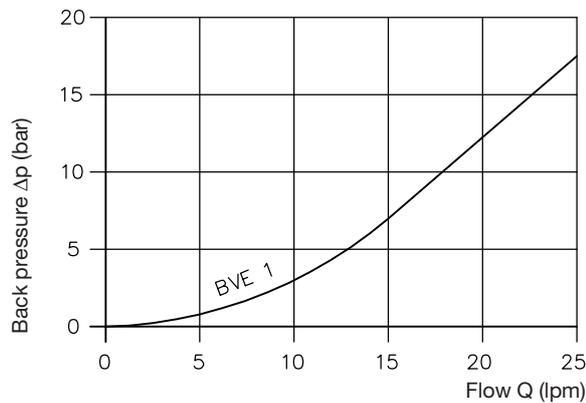

#### 3.1 General and hydraulic

Installed position	Any		
Over lapping at 3/2-way directional valves	Negative (transition from one to the other valve position is only completed in the respective end position). All ports are interconnected until the end position is achieved.		
Operating pressure	see table 1		
Material and surface treatment	Steel, DIN 50979-Fe ZnNi 8	BVE 1 and BVE 5	
	Steel, zinc galvanized / gas nitrided	BVE 3	
Mass (weight)	Basic type	Cartridge valve	Indiv. connection block
	BVE 1	0.5 kg	+ 0.8 kg
	BVE 3	0.7 kg	+ 0.7 kg
	BVE 5	3.8 kg	+ 3.8 kg
Hydraulic fluid	Hydraulic oil acc. to DIN 51524 table 1 to 3; ISO VG 10 to 68 acc. to DIN 51519 Viscosity range: min. approx. 4; max. approx. 1500 mm <sup>2</sup> /s Optimal operation range: approx. 10 ... 500 mm <sup>2</sup> /s Also suitable are biologically degradable pressure fluids type HEPG (Polyalkylenglykol) and HEES (synth. ester) at operation temperatures up to approx. +70°C.		
Temperature	Ambient: approx. -40 ... +80°C Fluid: -25 ... +80°C, pay attention to the viscosity range! Start temperature down to -40°C are allowable (Pay attention to the viscosity range during start!), as long as the operation temperature during subsequent running is at least 20K higher. Biological degradable pressure fluids: Pay attention to manufacturer's information. With regard to the compatibility with sealing materials do not exceed +70°C.		
Flow limitation	It is necessary to limit the flow down to the permissible range depending on the system pressure via throttles (see sect. 2). This applies to all circuits fed by an accumulator or when connected to high pressure circuits fed by high delivery pumps.  The orifice must be located on the accumulator side always. With valves version ..Z.. these should be installed in port C. For more detailed information, see table 2, section 2		

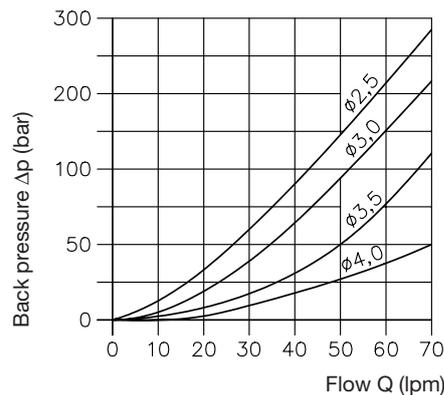

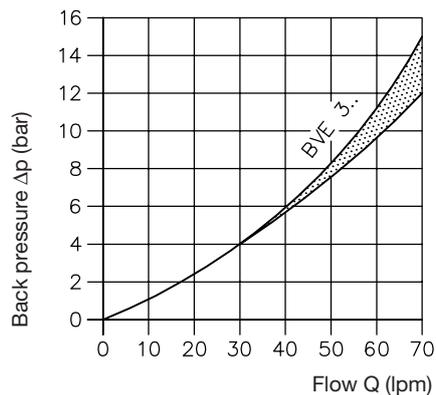

#### Δp-Q-curve

Basic valves

## 5. Appendix

### 5.1 Manual emergency actuation

Actuation aid  
(do not use any sharp-edged parts)

The valve may be actuated by pressing down the brass bolt visible from above by means of a steel pin or a screw driver etc.

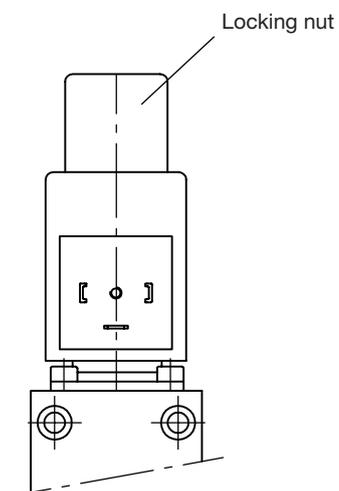

**Attention:** Any pressure at B puts a load on the brass pin, which results in a pressure dependent counter force. The pin diameter with type BVE 1 and 3 is  $\varnothing 3$  mm, i.e. 100 bar  $\Delta$  70 N; whereas it is  $\varnothing 4$  mm with type BVE 5, i.e. 100 bar  $\Delta$  125 N !

### 5.2 Actuation solenoid option B used as actuation lock (see table 3a)

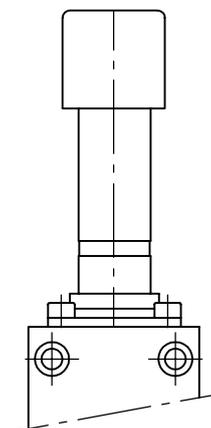

This actuation lock may be used as safety device e.g. during maintenance works or initial operation / set-up operation.

- Standard operation
  - Solenoid (coil) is mounted
  - The locking nut fixes the coil at the armature tube
  - Actuation is unlocked
  - Valve can be actuated via the solenoid
- Maintenance works / initial operation
  - Solenoid (coil) is not mounted
  - The locking nut is only lightly screwed onto the armature tube
  - Valve is fixed in working state

Standard operation

Maintenance works / initial operation

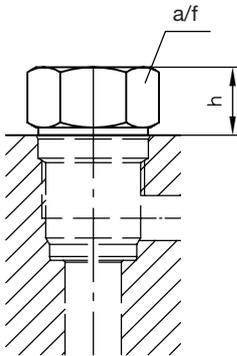

### 5.3 Options

#### Tapped plugs

Mounting holes in the manifold may be blocked if required by tapped plugs e.g. if uniform manufactured manifolds should be equipped with or without cartridge valves depending on application.
