

4/3 and 4/2 Proportional directional valve elements with LS (with Cross Piloted Counterbalance or Cross Piloted Check Valves Option)

EDG-DP...B1 – EDG-DP...R1
Component Series 1

RE 18301-22

Edition: 02.2025

Replaces: 06.2024

Size 6

Series 1

Maximum operating pressure:

- 350 bar (5000 psi) on pump side
- 350 bar (5000 psi) on consumer side

Maximum flow at 6 bar (87 psi) 40 l/min (10.6 gpm)

Ports connections G 3/8 - G 1/2 - SAE6 - SAE8

Spool position sensor available for this valve.

See RE18300-30

General specifications

The inlet section can be configured for either a fixed displacement pump or load-sense variable displacement pump. When simultaneous machine functions are actuated, the pre-compensators will automatically adjust to the highest load pressure via a shuttle arrangement, making the system circuit independent of variations in loads and pump pressures.

- **EDG-DP with Cross Piloted Counterbalance (B1)**

incorporates one or two Cross Piloted Counterbalance valves which allow free flow toward the A and B outlet ports, and lock in a leak free mode the flow returning from the actuator. Pilot pressure in the opposite line reduces the pressure setting of the counterbalance valve in proportion to the pilot ratio (4:1) until opening and allowing the flow return from the actuator. The pressure setting should be at least 1,3 times the highest expected load. Depending on the version selected, the counterbalance function can be double-acting or single-acting (only A, only B or both A and B ports).

- **EDG-DP with Cross Piloted Check Valve (R1)**

incorporates one or two Cross Piloted Check Valves which allow free flow toward the A and B outlet ports, and lock in a leak free mode the flow returning from the actuator, until sufficient pilot pressure is built up in the opposite line and the check valve is opened.

Main Field of Application

Truck mounted applications
Forestry machinery
Forklifts and Telehandler
Municipal vehicles
Cranes
Construction machines
Aerial working platforms
Heavy duty vehicles
Agricultural machines

General hydraulic layout

07 - Spool Variants

Functional description

The EDG direct acting proportional solenoid sectional valves with pressure compensation control the oil flow to actuators. These elements consist of a stackable housing (1) with a control spool (2), two solenoids (4), two return springs (3). Each solenoid (4), energized by PWM regulator, displaces the control spool from its neutral-central position “0” proportionally to the current received. When the spool is shifted and the metering notch is open, flow delivery starts and is controlled by a 2 way pressure compensator (7) ($P > A$; $P > B$).

When the solenoid is de-energized, the return spring pushes the spool back in its neutral-central position. Each coil (4) is fastened to the solenoid tube by the ring

nut (5). A push-pin manual override is included to actuate the valve without electrical power as needed.

Load pressure compensation

The pressure compensator (7) keeps the pressure differential on the main spool (2). The flow to the consumers remains constant, despite varying loads. The highest load pressure on the pump is signaled via the LS line and the integrated shuttle valve (6). Pilot operated check valves on A and B ports (8), prevent unexpected movement of the actuators. As alternative, Counterbalance valves (9) provide enhanced controllability according to specific application requirements.

Technical data

General		
Valve element with 2 solenoids	kg (lbs)	2.2 (4.85)
Valve element with 1 solenoid	kg (lbs)	1.7 (3.75)
Ambient Temperature	°C (°F)	-30....+90 (-22....+194)
Hydraulic		
Maximum pressure at P, A and B ports	bar (psi)	350 (5000)
Maximum static pressure at T	bar (psi)	210 (3050) [in case of Emergency Lever option, max. pressure is limited up to 30 bar at T]
Max. regulated flow at 6 bar (87 psi)	l/min (gpm)	40 (10.6)
For E schemes symmetrical spool pattern in neutral position (connection A to T and B to T) E-schemes flow pattern with only meter IN (spool type E___ I I) in neutral position: the opening area is approx the 50% of nominal cross-section. This spool type is suitable in combination with load holding valves applications.		Approx. 2% of the nominal cross-section
Hydraulic fluid General properties: it must have physical lubricating and chemical properties suitable for use in hydraulic systems.		Mineral oil based hydraulic fluids HL (DIN 51524 part 1). Mineral oil based hydraulic fluids HLP (DIN 51524 part 2). For use of environmentally acceptable fluids (vegetable or polyglycol base) please consult us.
Fluid Temperature	°C (°F)	-30....+100 (-22....+212) (NBR seals)
Permissible degree of fluid contamination		ISO 4572: $\beta_{x \geq 75} X=12...15$ ISO 4406: class 20/18/15 NAS 1638: class 9
Viscosity range	mm ² /s	20....380 (optimal 30....46)
Electrical		
Voltage type	PWM	120 Hz
Voltage tolerance (nominal voltage)	%	-10 +10
Duty		Continuous, with ambient temperature $\leq 50^{\circ}\text{C}$ (122°F)
Coil wire temperature not to be exceeded	°C (°F)	180 (356)
Insulation class		H
Compliance with		Low Voltage Directive LVD 73/23/EC (2006/95/EC), 2004/108/EC
Coil weight	kg (lbs)	0.228 (0.503)
Voltage	V	12 24
Nominal 100% current	A	1.76 0.94
Nominal Coil Resistance at 20°C (68°F)	Ω	4.05 13.6

Note

For applications with different specifications consult us.

Characteristic curves

Characteristic curves Q=Q (I) at 4 bar

Characteristic curves Q=Q (I) at 6 bar

2-way inflow controller

Measured with hydraulic fluid ISO-VG32 at 45° ± 5 °C (113° ± 9 °F); ambient temperature 20 °C (68 °F).

Characteristic curve for EDG-DP...B1

Pressure drop	Curve no.
Fully piloted	1
Through check valve	2

Characteristic curve for EDG-DP...R1

Cracking Pressure	Curve no.
0.5 bar (7.3 psi) free flow	1
Returning flow, fully piloted	2

External dimensions and fittings

- 1 Ring nut for coil locking (Ø 30.3 mm).
Torque 6 – 7 Nm (4.4 – 5.2 ft-lb).
- 2 Flange specifications. For tie rod and tightening torque information see data sheet RE 18301-90.
- 3 A and B ports.
- 4 Identification label.
- 5 Optional push-button manual override, EP type, for spool opening: it is pressure stuck to the ring nut for coil locking.
Mat no. R933002705
- 6 Optional screw type manual override, EF type, for spool opening: it is screwed (torque 6-7 Nm (4.4-5.2 ft-lb)) to the tube as replacement of the coil ring nut. Mat no. R930084529.

External dimensions for spool with nominal flow 9

- 1** Flow-boost system only for spool with nominal flow 9.
It always mounted on "A" side of the valve.

Electric connections

00 Without coil 	01 Protection class: IP 65 when connector with seal is properly screwed down. 
03 Protection class: IP 65 with female connector properly fitted (see drawing). 	07 Protection class: IP 69 with female connector properly fitted (see drawing).
